# FIRE BEHAVIOR FORECAST

**FORECAST NUMBER:** 7 Extended

**TYPE OF FIRE:** Wildland Fire

**FIRE NAME:** Goose Creek

**OPERATIONAL PERIOD:** August 6-8, 2018

**DATE ISSUED:** August 5, 2018

**TIME ISSUED:** 1730

**UNIT:** BLM Elko District Office

**SIGNED:** Boyd Lebeda, FBAN

## INPUTS

**Fuels** – The primary fuel types for the fire are Grass (GR1), Grass-Shrub (GR2), and Shrub (SH5). All fuel types have shown rapid fire behavior. \*\*\*Fuel and Fire Behavior Advisory for the Northern Great Basin – below 7000” has been extended for the period of July 31, 2018 – August 13, 2018\*\*\*

[https://gacc.nifc.gov/gbcc/predictive/advisories/Fuels\\_Fire\\_Behavior\\_Advisory\\_GB\\_07\\_30\\_2018.pdf](https://gacc.nifc.gov/gbcc/predictive/advisories/Fuels_Fire_Behavior_Advisory_GB_07_30_2018.pdf)

**Topography** – consists of north-south mountain ranges with complex, small watersheds. Between mountain ranges are broad valleys with narrow riparian areas.

**Weather:** See IAP Extended Weather Forecast

Spot weather forecasts can be requested at <https://www.weather.gov/spot/request/> Zone fire weather forecasts are available through Elko NWS Fire Weather page: <https://www.wrh.noaa.gov/fire2/?wfo=lkn> reference Zone NV 470 and Salt Lake <https://www.wrh.noaa.gov/fire2/?wfo=slc> Zone UT 478

## FIRE BEHAVIOR

**GENERAL:** Fuels are at critical levels - new starts will establish and spread rapidly – expect terrain and fuel driven fires in fine fuels with rapid rates of spread – will be accelerated by wind. Also continue to monitor the ERC. ERC tracking can also be done via the Great Basin Coordination Center website – Fuels/Fire Danger – <https://gacc.nifc.gov/gbcc/fuels.php>

There are three RAWs Stations in the fire proximity: Primary – Goose Creek RAWs 104105 (22 mi NNE at 5660’); Secondary - Rosebud 420914 (28 mi ESE at 4987’) and Rock Spring Creek (22 mi WSW at 5427’) View RAWs data at: <http://mesowest.utah.edu/index.html>

**Critical Thresholds from the NV-EIDC Pocket Card:** Combinations of these factors can greatly increase fire behavior:

- 20’ Wind Speed >15 mph
- RH <10%
- Temperature >90
- IC (Ignition Component) > 57

**The biggest fire growth day on Goose Creek/China Jim:**  
Extreme fire behavior with long range spotting

Goose Creek RAWs	Max Temp	Min Rh	Max Wind	ERC	Ignition Component
July 28	87	16%	16G26 NNE	87	72

**AIR OPERATIONS** - Areas of smoke and widespread haze may impact visibility.

### SAFETY

#### ENERGY RELEASE COMPONENT

+ ERC is calculated from the 1300 RAWs daily observation of temperature, humidity, daily temperature & RH ranges, and precipitation.

+ ERC can serve as a good characterization of a fire season as it tracks seasonal fire danger trends.

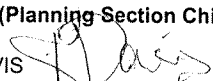

+ ERC has low variability and is the best fire danger component for indicating effects of intermediate to long-term drying on fire behavior.

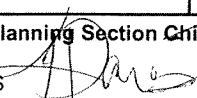

+ Wind is NOT part of the ERC calculation
